

## INDUSTRIAL PRODUCTS

Quatro offers high performance characteristics necessary for many of today's industrial technologies. Our innovative fabrication methods and advanced composite solutions reduce costs and improve efficiencies.

Products include:

### **Robotics**

Quatro fabricates robot arms that are specifically designed for high-speed manufacturing, packaging, material handling and assembly. The robotic arms are bladder molded and assembled under very tight tolerances to achieve the maximum performance and speed required by the industry.

### **Wind Energy**

Quatro's unique wind-energy processes have established cost-of-energy improvement by using a High Compression Bladder Molding Prepreg Process (HCBMP) for wind blades less than 10 feet in length.
