

DEFENSE PRODUCTS

AIM Aerospace - Quatro Operations specializes in the design and development of composite parts for applications, including marine, defense and unmanned aerial vehicles.

Driven by the increased strength, stiffness, light-weight properties, as well as corrosion and fatigue resistance of composite materials, the United States national defense system has reached a higher level of effectiveness. Quatro Operations operates under the highest quality standards and has the ability to design, prototype and manufacture a variety of components for advanced defense applications.

Products include:

Unmanned Aerial Vehicles (UAVs)

We have extensive experience in the design and manufacturing of Unmanned Aerial Vehicles (UAV) for leading autonomous system companies. We produce fuselage assemblies, wing assemblies, control surfaces, shielded electronic enclosures, sensor housings, fuel tanks and internal support structures. Quatro Operations is a supplier to the ScanEagle®, Integrator™ and Predator™ programs.

Military Aircraft

We are an industry leader in the product development and manufacturing of composite parts for defense applications including electronic enclosures, helicopter wiper blades, ducts and other various structural components.
