

INDUSTRIAL PRODUCTS

AIM Aerospace - Quatro Operations offers high performance characteristics necessary for many of today's industrial technologies. Our innovative fabrication methods and advanced composite solutions reduce costs and improve efficiencies.

Products include:

Robotics

Quatro Operations fabricates robot arms that are specifically designed for high-speed manufacturing, packaging, material handling and assembly. The robotic arms are bladder molded and assembled under very tight tolerances to achieve the maximum performance and speed required by the industry.

Wind Energy

Quatro Operation's unique wind-energy processes have established cost-of-energy improvement by using a High Compression Bladder Molding Prepreg Process (HCBMP) for wind blades less than 10 feet in length.
