

## MEDICAL PRODUCTS

AIM Aerospace - Quatro Operations is a pioneer of carbon composite technologies in the medical industry. We offer the proven ability to meet the high precision and performance properties of today's advanced medical products.

These composite parts, including tabletops and extensions, radiolucent accessories, leg supports and cradles are created in a Class 400,000 controlled contamination area (CCA) for the highest level of quality and precision.

### Products include:

#### Orthopedic Surgery

We have a long history of developing and manufacturing products for the orthopedic market place. Our high level of quality and precision allows us to meet the high demands of today's cost-competitive healthcare environment.

#### Diagnostic Imaging

The use of carbon fiber for diagnostic imaging is widespread due to the exceptional physical properties of the material. At Quatro Operations, we provide industry-leading expertise to manufacture components of high quality along with market-competitive pricing.

#### Digital X-Ray

Quatro Operation's expertise in medical composite manufacturing enables us to produce a wide variety of products and accessories for digital X-ray products including MRI, CT, PET and mammography panels.

#### External Fixation Products

Manufacturing such critical composites requires dedicated attention and immense skill. Quatro Operations employees are passionate about both of those skills. Each component is handmade to our customers' specifications and quality requirements.
